

AUZMET®

CASE STUDY

PROJECT: 3100 OLYMPUS
LOCATION: DALLAS, TX

Building the future

3100 OLYMPUS | DALLAS, TX

3100 OLYMPUS

Dallas, Texas

SECTOR: Commercial

Scope of Work

Design, Supply and Install – ACM Fins, Perforated Metal Roof Screen, Woodgrain Finish Feature Trellis, Custom Steel Railings, Metal Wall Panels and Dumpster Gates

Challenges

Successfully coordinated with a wide variety of trades for a successful project completion. The in-house designed and fabricated wooden trellis feature pieces needed to be accurately predetermined dimensions. This necessitated advance design to ensure a perfect fit and meet project schedule due to post finishing requirements after fabrication. With the assistance and cooperation of corresponding trades we successfully achieved this, with a perfect fit and alignment.

Summary

There is no end to the amount of scopes Auzmet can simultaneously coordinate on any single project, with no sacrifice on quality for quantity, 3100 Olympus is a leading example of such a project.
